### **DETAILED ACTION**

Claims 1-33 are currently pending.

It is noted that nonstatutory (e.g. use claims) and improperly dependent (e.g. "use of a method claim") claims 28-33 are being treated as method claims for purposes of lack of unity.

#### ***Election/Restrictions***

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-11, drawn to a method of immobilizing receptors.

Group II, claim(s) 12-27, drawn to an analyte assay method .

Group III, claim(s) 28-29, drawn to a method of sequencing nucleic acids..

Group IV, claim(s) 30-31, drawn to a method of obtaining patient diagnostic info.

Group V, claim(s) 32, drawn to a method of analyzing libraries.

Group VI, claim(s) 33, drawn to a method of screening human populations.

2. The inventions listed as Groups I-VI do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: the above-identified methods have different method objectives utilize different reactants and/or reaction conditions and/or steps and require different

and separately burdensome manual/computer bibliographic searches. It is noted that claim 1 does not serve to properly link any of the other methods (including the “use” claims) , but even, assuming arguendo, if it did, claim 1 nevertheless fails to represent a special technical feature since irradiation/illumination to achieve monomeric immobilization in “closed” channel supports was known in the prior art. See e.g. Dehlinger WO 97/19740, Abstract, Claims and Figures.

#### **RESTRICTION/ELECTION OF SPECIES (Groups I-VI above)**

This application contains methods which employ the making and/or use of “Polymeric receptors” (e.g. peptides, nucleotides etc.)) which are structurally and functionally diverse compounds of different structure and/or physicochemical properties and/or separate manufacture and/or use; and additionally require different and separately burdensome manual and/or computer structure, classification, name and bibliographic searches.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species of polymeric receptor for prosecution. Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Art Unit: 1639

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).
